Medical and Protective Risk Management

We write the concept, we train the people who run it, and we work on site ourselves. Remote, offshore and high-threat environments, worldwide.

What we do

Medical support and rescue planning	The medical concept is the deliverable, derived from distance and time to definitive care rather than from a job title. Equipment and drug lists, the evacuation chain, and the staffing that follows from it.
Risk and threat assessment	Country and area assessments for a named operation, not a subscription feed with your logo on it. Site surveys on the ground, with a fix list ordered by what actually reduces exposure.
Travel risk management and duty of care	Programs built from the trips you actually make, rated against the profile of the person traveling. Approval thresholds, pre-travel briefings, and who answers the phone at night.
Close protection and executive protection	Most enquiries arrive as a request for people. We start one step earlier and ask what the threat is, because the answer changes the whole design. Advance work on venues and routes follows from that.
Crisis and emergency management	Contingency plans built around named roles, with decision thresholds somebody can check at three in the morning. Evacuation planning that names the assembly point, the transport and the fallback route.
Training and briefings	Casualty care for teams a long way from an ambulance. TCCC and TECC for protection and security personnel. Crowd safety, and hostile environment awareness for people going into difficult places.

Where our responsibility sits

Selected mandates

Long-term protective mandate
Protection for a family with a highly exposed profile, wherever it traveled. Licensed local teams in each country, briefed to one standard.

International film festival
Security and crowd management across venues, arrivals and the red carpet, with more than 300 security personnel under our command.

Offshore wind project, North Sea, 2024
Medical and rescue concept with the complete MEDEVAC chain, planned end to end and managed in operation.

Who leads the work

Maximilian Faust

Co-Founder and CEO, EMBA, MBA

Highest non-physician qualification in emergency medicine (Germany and Switzerland), offshore and expedition medic, since 2011, EMS incident commander (Germany, 2017). Hostile environment close protection officer (South Africa, 2024), counter- and anti-surveillance qualified. NEBOSH International General Certificate, Professional Diploma in Risk and Safety Management for Crowds and Events (Glasgow Caledonian University). University lecturer in hazard management, doctoral candidate at the College of Remote and Offshore Medicine.

Inga Faust

Co-Founder and COO, EMBA, MBA

A decade of German police service, including event and VIP protection. Security management and security risk management, training and briefings. Close protection for private principals and families, residential security team lead, and crowd safety management at international festivals. QNUK Level 5 Award in Crowd Safety Management, Remote Emergency Medical Technician Award (CoROM, 2026), counter-surveillance trained. University lecturer in hazard management, doctoral candidate in counter-terrorism and deradicalization (EUCLID).

How an engagement starts

One call about the operation you are running and the standard your client audits you against. What follows is a document with a delivery date, or a training block with a date and a headcount. Concepts and training we deliver in our own name. On the ground we work under the license of the prime.
